Zur

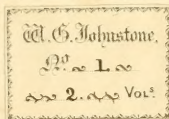

Fortpflanzungsgeschichte der gesammten Vögel

von

**Friedrich August Ludwig Thienemann.**

*collected between 1845-1854*

Ausgearbeitet in den Jahren 1845 bis 1854.

LC Card: 6-17600

60366

Seit vier Jahren von heftiger, höchst schmerzhafter Krankheit an jeder strengwissenschaftlichen Arbeit verhindert, war ich völlig ausser Stand, den Text zur «Fortpflanzungsgeschichte der gesammten Vögel u. s. w.» zu vollenden. Die letzten zehn Tafeln des Werkes sind seit mehr als zwei Jahren ganz fertig, und warteten von einer Zeit zur andern, ob nicht Besserung in meinem Zustande eintreten würde. Dies schiebt sich aber immer weiter hinaus, sodass es der Herr Verleger mit mir für gerathener hielt, dieselben allein erscheinen zu lassen, damit wenigstens dieser Theil des Werkes als abgeschlossenes Ganzes gebunden werden könne. Um die Tafeln leicht zugänglich zu machen, ist ein vollständiger Index angefertigt worden, der zugleich als Norm der jetzt angenommenen Speciesnamen zu betrachten ist und welcher zugleich die wenigen unrichtig bestimmten Arten der rechten Art zuweist. Sobald mir der Himmel wieder etwas leidlichere Gesundheit schenkt, werde ich mit möglichstem Eifer den Text zu vollenden suchen. Zu diesem würde noch auf drei Tafeln das Korn der Eier von den bekannten, wahrhaft gesonderten *Generibus*, in dreissigfacher Vergrösserung dargestellt, beigegeben werden, wovon zwei Tafeln bereits mit grösster Sorgfalt ausgearbeitet sind. Meine Sammlung enthält jetzt fast 1200 sicher bestimmte Arten von Vogeleiern. Von diesen sind an 900 Arten in 1800 Nummern auf den 400 Tafeln dargestellt. Die nicht abgebildeten werden wenigstens dem Texte zu Gute kommen.

Dresden, im October 1856.

**Thienemann.**

# Namensverzeichniss der abgebildeten Vögeleier.
